

JBIG2 sample image

The figure below is a 1-bit bitmap embedded with /Filter /JBIG2Decode. pdf.js loads either jbig2.wasm or jbig2_nowasm_fallback.js to render it.

Bitmap: 4000×5500 px, 1-bit. JBIG2 stream: 2570456 bytes.

About this PDF

JBIG2 (Joint Bi-level Image Experts Group) is a compression format for 1-bit document scans. pdf.js decodes JBIG2 streams in one of two ways:

- A WebAssembly module (jbig2.wasm) built from a C decoder.
- A pure-JavaScript fallback (jbig2_nowasm_fallback.js).

Set `pdfDefaultOptions.useWasm = false` to opt into the fallback — useful when your Content Security Policy forbids 'wasm-unsafe-eval'. Output pixels are bit-for-bit identical; only decoding speed differs.
